

REVIVAL DERMATOLOGY

Post Procedure Instructions

BIOPSY CARE

- It is very important to take care of your biopsy site so that any scarring can be minimized.
- Please keep the area clean with soap and water twice daily. If a scab forms, use hydrogen peroxide on a wet wash cloth to remove the scab.
- Keep the area MOIST with vaseline or Aquaphor healing ointment and covered with a bandaid if possible. If you can't cover it with a bandaid, make sure you are applying sunscreen.
- If there is any increasing redness, pain, swelling or yellow discharge please call the office.
- If you have not received your pathology report within 2 weeks after your biopsy please call the office.
